

Scenario #1: Generate a quote with valid license plate and CPF

Given the user is on the insurance quotation page
When they enter a valid license plate and CPF
And select "Complete" coverage
And choose "Yes" for third-party coverage
And click "Generate Quote"
Then the system should display the estimated policy value

Scenario #2: Generate a quote with only "Simple" coverage

Given the user is on the insurance quotation page
When they enter valid license plate and CPF
And select "Simple" coverage
And choose "No" for third-party coverage
And click "Generate Quote"
Then the system should display the estimated policy value

Scenario #3: Generate a quote with "Premium" coverage and no third-party

Given the user is on the insurance quotation page
When they enter valid license plate and CPF
And select "Premium" coverage
And choose "No" for third-party coverage
And click "Generate Quote"
Then the system should display the estimated policy value

Scenario #4: Change coverage type before generating quote

Given the user is on the insurance quotation page
When they enter valid license plate and CPF
And initially select "Simple" coverage
And then change to "Premium"
And click "Generate Quote"
Then the system should display the selected "Premium" coverage

Scenario #5: Delete previous completed fields

Given the user is on the insurance quotation page
When they enter valid license plate and CPF
And initially select any type of coverage
And choose "Yes" or "No" for third-party coverage
And click in "Cancel"
Then the system should clean all the fields of the page
